Developer advocate and TypeScript engineer with 3+ years shipping developer tools, docs, and frontends. Independently shipped a CLI with 6M+ runs, rebuilt a 400+ page docs site without losing search traffic, and grew a developer Discord past 10,000 members.

EXPERIENCE

Prisma - Developer Advocate (DevRel + Frontend and Fullstack Engineering)

March 2025 - May 2026

- Independently planned, built, and shipped create-db, a CLI that provisions a ready-to-query Prisma Postgres database in under 3 seconds (down from several minutes) using a Cloudflare Worker and a Next.js claim flow. Coordinated across multiple engineering teams; the tool has passed 6M+ CLI runs. When usage spiked, traced it to abusive traffic within an hour and shipped Cloudflare rate limiting to stop it.
- Led a 400+ page docs rebuild, owning information architecture and technical accuracy. Shipped the 301 redirect map that preserved ~90% of organic search traffic, a custom 404, and Sentry + PostHog + Slack alerting that reports outages in under a minute.
- Made the docs readable by AI agents: llms.txt sub-indexes, content negotiation, .md aliases on every route, and a markdown 404 handler. The llms.txt endpoint reached 5,000+ monthly AI-crawler requests within weeks.
- Developed the Prisma v7 and Prisma Postgres launch pages and React components for the website, docs, and blog. Several components were adopted into the Eclipse design system.
- Wrote 20+ framework, runtime, and integration guides (Next.js, Astro, TanStack Start, Bun, Deno, NestJS, Clerk, Cloudflare Workers), averaging 3,000+ monthly views each, plus an upstream docs PR to Better Auth.
- Grew the Prisma Discord past 10,000 members, launched the Pillars community moderator program, and formed partner relationships with TanStack, Bun, and Deno, including a co-written TanStack integration guide.
- Authored three Claude Code skills (prisma-voice, blog-writing, guide-writing) and published them as a plugin in Anthropic's official listing. The team uses them daily.
- Designed PostHog dashboards used in weekly business reviews and wrote the DevRel UTM tagging spec that tied community work to revenue attribution.

Inner Armor - Front End Developer

July 2024 - March 2025

- Rebuilt an abandoned internal admin dashboard in Remix, TypeScript, and Tailwind. Usage had been declining; the new dashboard reached 100% company-wide adoption.
- Implemented 10+ interactive data visualizations with Observable Plot and SVG/Canvas for cross-period comparison.

Elevate Digital IO - Full Stack Developer (Contract)

January 2024 - August 2024

- Delivered 10+ CRUD interfaces with Prisma and GraphQL over PostgreSQL, focused on efficient queries and data integrity.
- Led development of an advanced filter and search system in RedwoodJS and Tailwind, and extracted shared components that cut duplicated UI code.

PROJECTS

clasp.sh - Next.js, TypeScript, shadcn/ui - <https://clasp.sh>

- Browser-only tool for exporting styled code screenshots as PNG/JPG, with 242 languages and VS Code theme import. It needs no account and uploads nothing.
- Wrote a Canvas 2D render engine without React so the live preview and the exported image always match pixel for pixel.

OPEN SOURCE CONTRIBUTIONS

- Astro, Clerk, Deno, Cloudflare, Next.js, Better Auth, and more — guides and documentation across the TypeScript ecosystem
- Wrote "Your docs are invisible to AI" — aidanmcaster.com/blog/your-docs-are-invisible-to-ai
- Anthropic Claude Code — published a plugin to the official listing for Prisma database management
- trpc-cli — contributed hidden CLI flag support via Zod meta
- better-hub — contributed stars pages and routing to Better Auth's GitHub client

TECHNICAL SKILLS

TypeScript · JavaScript · Python · React · Next.js · Remix · Astro · Svelte · Tailwind · Node.js · Cloudflare Workers · Prisma · PostgreSQL · GraphQL · Sentry · PostHog · Claude Code · MCP · Technical Writing · SEO · GEO

EDUCATION

Nucamp — Full Stack Development Bootcamp

March 2023 - February 2024
